I am writing a review in English for an Italian book. In this book, the comments are written in Italian, while the body is written in English. I am using a babel package to translate them. Here is a simple example `\begin{comment} This is a comment \end{comment}` I find it very annoying to use! in every time I write a comment. I mean, I don't even need to write! in a lot of places in my documents. Is there any way to write comments in LaTeX without using!? A: Since comments are invisible, you do not need! in the document (except in the index). The babel package can be used in the source code as well. You can use `ocomment{}` in the sources and then have it translated by babel. `\documentclass{article} \usepackage{babel} \begin{document} \begin{comment} This is a comment \end{comment} ocomment{This is a comment.} \end{document}` Q: Sql server 2008 - how do I get rid of all the space in a column that's only numbers? The new Soft Tip tool adds a new soft material effect to make the exterior surfaces easier to distinguish. Surface Collection: The Surface Collection tool simplifies collection of surfaces from your project in a single click, and replaces the Subdivide tool. CAD View: The new CAD View improves visibility of model objects by displaying their contours in dark color and by hiding all other features. 3D Visualizer: The 3D Visualizer tool shows 3D visualizations in real-time with interactive methods. Picking: Picking is smoother and faster. You can use the new Pick tool to select points on surfaces and in solids. Selection Controls: Select polyline, circle, ellipse, rectangle, and text objects with the new Select tool. Annotation tools also have improved controls, and you can make additional, coordinated selections, such as moving a feature or extending an annotation. 2D Trace: The new Trace 2D feature allows you to trace an existing path and add your own design.
