Returnil Virtual System Pro is the new generation of the tried and tested Virtualization Software. It simulates the complete Windows Server operating system so that you can test programs and applications that require Windows Server without installing a real copy. Even though the software is still in beta testing phase and there are still some bugs, the new version is not only a great simulator, it also features a lot of new capabilities. Virtual System Pro is extremely stable, it runs 100% in hardware mode and, by the use of a special internal driver, it eliminates CPU performance degradation from real time operation. A lot of fixes and enhancements were done to improve stability, speed and more importantly the performance of the software. Virtual System Pro now supports much more features than before, like Windows Server 2008, Windows Server 2003, Windows 2000, Windows 2000 Server, Windows NT 4.0 and Windows NT 4.5. Also, there is now a scriptable command line interface to the VM and integration of network drivers, which can be used to emulate a complete network infrastructure. In addition, Virtual System Pro now has a lot of support for virtual server scenarios, like NFS and Kerberos authentication, as well as IIS and PHP applications. Many of these new features are accessible through the command line and/or a fully scriptable interface. Virtual System Pro is designed to run on Windows 2000 and Windows 2000 Server, and it supports the latest Windows Server operating system versions (Windows Server 2008, Windows Server 2003, Windows Server 2000, Windows NT 4.0 and Windows NT 4.5). Returnil Virtual System Pro is designed for two types of use: A limited testing mode to allow you to test your applications without having to worry about the system crashing or the programs on your computer to crash. If you run this in your computer, you can use your computer as it would be in normal mode. In this mode, all files, programs and system settings are preserved. Running this mode is similar to a safe mode. Another mode of use is to "guard" your computer against viruses and other malicious applications or drivers. With this mode, you can check for known viruses, known malicious drivers and known user changes. Once you have completed the tests, you can return to your normal mode. In addition, the software keeps a record of all test procedures and has a log file with the most relevant information so that you can easily trace the steps you did in the "guarding" mode. The test results are displayed in a treeview. Returnil

After reading a lot of comments, but still no one who finally succeeded to install this screen on my screen and on my Macbook Pro, I can tell you, this screen works perfectly. It is very small, so everything is great. The only problem, when the screen is in Standby, it has a very slight bleed, but after installing my driver, the leak is not more. My Macbook Pro has a problem with one of the last drivers, a problem that is fixed with this screen. There is no input lag when typing. Read the comments and I think this screen is ideal for all, at a good price, because you don't need to spend your money on a screen to have a good experience, the screen, has really, no problems. Cheers Sébastien ☆☆☆It was a long waiting, but I have a smooth experience☆☆☆ I have a very old PC, a Pentium 4 2,6 GHz. Before installing this screen, I have this problem that I could not install a game because of the screen. I tried to configure everything, and finally I installed the screen.
