## What's New In?

You can easily store, edit and manage your projects, create text with advanced formatting options, write documents to Word, RTF, XML, PDF, HTML, HTML and image formats. A security issue affects Microsoft Windows and other Microsoft software products that when installed allow users to read from and write to arbitrary files. These products include Microsoft Office 2011 for Mac, Microsoft Office 2011 for Windows, Microsoft Office 2011 for Windows Server 2008 and Microsoft Office for Mac 2011. A security issue exists when the Dok\_importexport component reads data from the exported file Dok.xml when exported from the importexport module. The issue is in the handling of the attributes of the Tag element of the xml file. An attacker could exploit this issue to execute arbitrary code with SYSTEM privileges. Microsoft has released an update for Microsoft Office 2010. The update addresses a number of vulnerabilities, some of which affect Microsoft Office for Mac 2010. The update is available for users who are running Microsoft Office 2010. For additional information about this update, see the "Microsoft Security Bulletin" site. A memory corruption issue exists when Windows DirectShow Filters (dxgi.dll) fails to clear an internal variable. The issue can be exploited by a local user to gain the same user rights as the current user. Successful exploitation of this vulnerability could allow an attacker to execute arbitrary code with SYSTEM privileges. A vulnerability exists when the MakeDocInstanceList function of the Microsoft Word Object Library (Word.OCX) fails to validate the spelling of the English language and make an inappropriate translation of user-defined text. An incorrect value is validated in the MakeDocInstanceList function of the Microsoft Word Object Library (Word.OCX). An attacker who can convince a user to open a specially crafted document could exploit this issue to execute arbitrary code with the same user rights as the current user. A flaw exists in the ReadHtmlFile function of the Microsoft Word Object Library (Word.OCX). An attacker who successfully exploited this vulnerability could execute arbitrary code with the same user rights as the current user. Microsoft has released an update for Microsoft Office 2010. The update addresses two vulnerabilities, some of which affect Microsoft Office 2010. The update is available for users who are running Microsoft Office 2010. For additional information about this update, see the "Microsoft Security Bulletin" site. A remote code execution vulnerability exists when Windows DirectShow Filters (dxgi.dll) fails to properly handle a malformed WVP\_CALLBACK\_STATUS structure. An attacker who successfully exploited this vulnerability could execute arbitrary code with SYSTEM privileges. A vulnerability exists when the Word HTML Converter fails to properly handle a malformed CUI\*\_QWORD structure. An attacker who successfully exploited this vulnerability could run arbitrary code with elevated privileges on a user's computer. Microsoft has released an update for Microsoft Office 2007. The update addresses three vulnerabilities,
