CAPTIVATE2 Configuration Wizard Description: CAPTIVATE2 is an integrated software application that is used for PC data recovery purposes. The tool makes use of deep-scan and memory-wiping techniques to recover lost data, and its developer has spent a lot of time testing the program to ensure its success rate. CAPTIVATE2 comes with three functions, namely Probe, Deep Scan and Memory Wiping. The first two enable you to perform deep-scan and memory-wiping of the target PC to recover data, and the third feature is used to save a specific sector of a hard drive and remove old data before data recovery, for improving the chances of successful data recovery. You can select the deepest scan level, the recovery type, as well as select the operating system to scan and the hard drive to test. Additionally, you can view scan information, obtain recovery results, and select advanced recovery options, as well as backup data to external drives, and perform drive formatting. All in all, CAPTIVATE2 is an excellent software tool for recovering lost data, and its success rate is outstanding. NILFS4BK Description: NILFS4BK is a freeware software 81e310abbf

What's New in the Security Center Pro?

Security Center Pro is a lightweight software application specialized in offering network traffic monitoring capabilities and protection in real-time, as well as proactive blocking mode of network nodes based on their threat level. The tool features IDS (intrusion detection system) and IPS (intrusion prevention system) security monitoring options for helping you stay away from unauthorized network connections, malicious activities and potential intruders. User interface You are welcomed by a clean layout that displays a system summary which includes information about the Monitor, Views, Protection, and Alerts scanner, as well as Security Center Definitions. Additionally, the tool implements two gauges that record details about the average and maximum threat and vulnerability levels. Real-time monitoring feature Security Center Pro gives you the possibility to run a new scan (all previously discovered nodes are deleted) and view scan details about the total available and protected nodes, as well as active, inactive and unmanaged nodes. Plus, you can tweak several scan settings by activating a full security scan mode that allows you to check your nodes' activity and detect their current status, collect node names, gather information about the node service types, wireless access points, and computer usernames, as well as identify network activity. Network viewing options Security Center Pro lets you get information about the network view (current network entities and connectivity) and performance view (current network unicasts, multicasts and broadcasts). The view mode is particularly useful especially if you want to graphically analyze your network security and performance. Real-time protection and alerts The program lets you set up rules for the intrusion detection module in order to be able to discover intruders on your network (e.g. new or changed node detection, vulnerable ports), as well as rules for blocking intruders from accessing your network (e.g. real-time alerts on network intruders, notification message prevention). You are allowed to work with two types of alerts, namely detection and prevention. Both options show messages regarding detection or prevention of potential intruders. Plus, you can create reports, archive messages and clear current alerts. Configuration settings Security Center Pro comes packed with several settings for helping you run the utility at Windows startup, enable popup messages on discovered alerts, export the currently selected server database to HTML file or SQL/Access database, grant user permissions, automatically remove inactive nodes, exclude specific node addresses, and control the adapters. Threat settings allow you to pick the preferred thresholds (low, moderate, elevated, high or severe), vulnerability features enable you to select the appropriate computer ports and names for each vulnerability level in the list, while the alert mode gives you the freedom to remove or archive alerts, and automatically forward alerts via email, SNMP, Syslog or Run command. What is new in official Security Center Pro 5.0.3 software version? - May 20, 2018: . If your Security Center is not running you
